

JENNIFER DARGIN | JORDAN, 2015

- Public Health major at University of Massachusetts, Amherst
- Conducted research on water scarcity
- Volunteered with charitable health centers in Jordan
- Presented at her university's Public Health Study Abroad session and served as a peer advisor

Jennifer spent her study abroad experience in Jordan taking intensive Arabic language training, visiting refugee camps and community hospitals, and interviewing government health sector officials. These experiences prepared her to complete research while abroad about water conservation awareness and perceptions held by her Jordanian peers at a local university. Her research concluded with her proposed efforts to promote reduced water consumption practices in Jordan and the world.

Jennifer has continued her passion for environmental conservation since her experience in Jordan, and has since researched biotechnology with a university in Pakistan. She is currently pursuing a Master of Science degree in Civil Engineering from Texas A&M University.

“Studying abroad made me realize the dire need for professional experts on Earth’s water resources to solve the environmental and societal challenges facing the world’s water supply.”

The Benjamin A. Gilman International Scholarship is a program of the U.S. Department of State, supported in its implementation by the Institute of International Education (IIE). The Program offers grants for U.S. citizen undergraduate students of limited financial means to pursue academic studies or credit-bearing, career-oriented internships abroad. Such international exchange is intended to better prepare U.S. students to assume significant roles in an increasingly global economy and interdependent world.
